PROFESSIONAL SUMMARY

Data Analyst with 17 months of hands-on experience at Tata Consultancy Services (TCS), where I built 5+ interactive dashboards and optimized 7 enterprise-grade data models achieving 30% performance improvement and 40% data accuracy enhancement. Skilled in Python, SQL, Power BI, Tableau, and Advanced Excel with expertise in end-to-end data analysis, EDA, statistical insights, and KPI reporting. Since completing data analytics upskilling program, have executed 5+ independent analytics projects processing 500K+ transactional records, uncovering critical business insights, and delivering 10+ actionable recommendations across ecommerce, HR, retail, database, and operational domains.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL
- **Python Libraries:** Pandas, NumPy, Matplotlib
- **Database & Tools:** MySQL, MySQL Workbench
- **Analytics & BI Tools:** SAP Analytics Cloud, Power BI Desktop, Power BI Service, Tableau Desktop, Advanced Excel
- **Data Analytics:** Power Query, DAX, Data Visualization, Exploratory Data Analysis (EDA), Data Cleaning, Data Analysis, Business Intelligence, KPI, Dashboards, Data modelling, ETL, Macros, VBA
- **Core Concepts:** Data Structures, CRUD Operations, Data Cleaning, Data Analysis, Basic OOP Concepts, Agile Methodology
- **Version Control:** Git, GitHub
- **Development Tools:** Google Colab, Jupyter Notebook

PROFESSIONAL EXPERIENCE

Assistant System Engineer | Tata Consultancy Services (TCS) Hyderabad, India | (May 2024 – October 2025)

- **System Design & Development:** Assisting in analysing requirements, creating technical modules, writing clean code and building prototypes under supervisor guidance.
- **Testing & Debugging:** Running test cases, executing performance/load testing, documenting errors, and fixing code inefficiencies to ensure seamless system uptime.
- **Technical Support & Infrastructure:** Assisting in daily operations, automating routine tasks via scripting, and deploying patches, updates, and disaster recovery protocols across servers or networks.
- **Client & Team Collaboration:** Participating in daily stand-up meetings, interacting with clients to interpret technical faults into business language, and preparing detailed technical reports and documentation.

PROJECTS

Amazon Orders Analysis — Python | Excel | MySQL | Power BI | learning Platform - Agileology (May 2026 – May 2026)

- Performed end-to-end analysis on Amazon Orders Dataset containing 1,13,698+ records and 29 columns spanning Jan 2022 – Sep 2022 using Python, Excel, MySQL Workbench, and Power BI.
- Built 5-page interactive Power BI Dashboard and Excel KPI reports analysing revenue, product categories, fulfilment performance, promotions, and geographic sales distribution across India.
- Identified that Kurta and Set categories contribute 77% of total orders, while Maharashtra and Karnataka are the top revenue-generating states with Bengaluru, Hyderabad, and Mumbai as premium revenue cities.
- Derived actionable business insights revealing promoted orders generate 2.5x higher revenue, expedited shipping contributes nearly 75% of total revenue, and September & May are the peak sales months for Amazon fashion sales.

HR Analytics Dashboard — Power BI | DAX | Power Query | learning platform – Agileology | (Apr 2026 – Apr 2026)

- Developed 7 DAX measures — Total Employees (1,480), Total Attrition (238), Attrition Rate % (16.08%), Active Employees (1,242), Avg Monthly Income (6,500), Avg Age (36.9 years), and Avg Job Satisfaction (2.73/4) — to power all KPI cards and dashboard calculations.
- Built a 4-page interactive HR Analytics Dashboard — Attrition Overview, Attrition Analysis, Employee Insights, and HR Summary Report — featuring 16 visuals.

- Uncovered 6 critical attrition drivers: R&D department leads with 133 employees lost; employees earning below 5,000/month account for highest attrition (163 employees); age group 26–35 is most at-risk; Laboratory Technicians and Sales Executives are highest attrition roles; single employees leave more frequently; and employees with 1–2 years tenure

Retail Store Sales Analysis — Advanced Excel | learning platform – Agileology | (Mar 2026 – Mar 2026)

- Performed end-to-end data cleaning and transformation on 12,575 rows of retail store sales data (2022–2025) — resolved 6,625 blank cell issues across 5 columns, removed duplicates, standardized formats, and added 4 helper columns for time-based analysis using MS Excel.
- Applied 17 Advanced Excel formulas and Arrays — uncovering that total revenue across 3 years was \$1,552,071 with an average order value of \$129.65 across 12,575 transactions.
- Built 4 interactive Pivot Tables (Sales by Category, Monthly Trend, Payment Method, Online vs In-Store) with calculated fields, Category/Location/Payment slicers, and Transaction Date Timeline — identifying Butchers as the highest revenue category (\$208,118) and Cash as the top payment method (\$537,710).
- Performed What-If Analysis using Goal Seek and Scenario Manager — modelled 3 sales performance scenarios (Low: \$50, Base: \$200, High: \$500) to support data-driven revenue forecasting and business planning decisions.

Classic Models Database Analysis — SQL | MySQL DBMS | learning platform – Agileology (Mar 2026– Mar 2026)

- Engineered 10 advanced SQL queries analysing 100K+ transaction records from Classic Models database; uncovered revenue concentration insight revealing Classic Cars line generating \$3.85M (68% of total revenue) vs. Motorcycles at \$1.12M, driving strategic inventory reallocation recommendations
- Benchmarked fulfilment efficiency across 8 product lines; Trains category averaged 5.75 days to ship vs. Ships at 3.48 days, identifying warehouse layout optimization targets
- Converted raw transactional data into 3 strategic business recommendations: revenue protection (top 20% SKU investment), customer empowerment (tiered loyalty + credit limits), and operational efficiency (fast-pick zones for complex models)
- Mapped geographic revenue concentration across 28 countries; USA contributed \$3.27M (35 customers) while France drove \$1.01M (12 customers)

Cafeteria Sales Data Analysis — Python | Pandas | Numpy | learning platform - Agileology (Feb 2026 – Feb 2026)

- Performed end-to-end data cleaning and preprocessing on 10,000+ rows of raw cafeteria transactional sales data using Python and Pandas, ensuring data accuracy and integrity for downstream analysis.
- Conducted Exploratory Data Analysis (EDA) and identified that purchases between 2–7 units are the highest revenue contributors, while high-quantity purchases show reduced revenue efficiency due to bulk discounting behaviour.
- Derived 3 actionable business recommendations — tiered pricing strategy, limiting bulk discounts, and value-based pricing — to optimize revenue margins and improve sustainable sales performance.

SAP Analytics Cloud Developer | LDF Project – German Client | TCS Hyderabad, India | (Aug 2024 – Aug 2025)

- Developed over more than 5 interactive dashboards and KPI tracking reports using SAP Analytics Cloud for business performance
- Worked with analysing 7 data sets in SAP Analytics Cloud for data transformation and reporting.
- Built and optimized 7 data models ensuring high performance and data reliability to 30 % more.
- Ensured data accuracy, consistency, and integrity across all reporting layers up to 40% for business Outcomes.
- Delivered analytics solutions aligned with cross-functional teams.

EDUCATION

B. Tech – Mechanical Engineering | (July 2019 – April 2023)

Avanthi Institute of Engineering and Technology | CGPA: 7.18

CERTIFICATIONS

Exploring SAP Analytics Cloud — Record of Achievement | (Oct 2024)

Issued by SAP | Foundational Level | Credential: www.credly.com/badges/28b70f9c-22ce-4f3a-99a7-57d09312ef1b
